

Memory Management Proficiency

Week-01:

Day	Topics	Tasks
01	Stack vs Heap vs Global Memory	<ul style="list-style-type: none">- Study memory types: Stack, Heap, Static (Global).- Write small programs to print addresses of different variables.
02	Pointers & References	<ul style="list-style-type: none">- Learn how to declare and use pointers and references.- Modify data through pointers.- Pointer to Pointer concepts.
03	Dynamic Memory Allocation (new / delete)	<ul style="list-style-type: none">- Practice allocating and deallocating memory using new and delete.- Study what happens when you forget to deallocate (memory leaks).
04	Stack Overflow & Memory Leak Simulation	<ul style="list-style-type: none">- Write a recursive function that causes a Stack Overflow.- Write a program that leaks memory intentionally.
05	Fixing Memory Leaks Properly	<ul style="list-style-type: none">- Refactor the previous day's code to correctly deallocate memory.- Practice both delete and delete[].
06	Stack vs Heap Arrays	<ul style="list-style-type: none">- Create arrays on Stack and Heap.- Compare behaviors (lifetime, access speed).- Measure time if possible.
07	Weekly Review	<ul style="list-style-type: none">- Rewrite main programs without looking.- Identify why each error happens and how you solved it.

Week-02:

Day	Topics	Tasks
08	Stack Frames Visualization	<ul style="list-style-type: none">- Trace how local variables are arranged in memory.- Manually simulate Stack Frames.
09	Heap Fragmentation Simulation	<ul style="list-style-type: none">- Write a program to simulate Heap Fragmentation (allocate/free blocks randomly).
10	Best Practices in Manual Memory Management	<ul style="list-style-type: none">- Study rules like: "Who allocates, deallocates," avoiding double-free, etc.- Create a small checklist for memory-safe code.
11	Memory Debugging Tools (Valgrind /Address Sanitizer)	<ul style="list-style-type: none">- Install a memory checker.- Learn how to detect leaks and invalid memory access.
12	Practical Debugging Session	<ul style="list-style-type: none">- Create a small buggy program.- Find and fix the memory issues using debugging tools.
13	Dynamic Linked List Project	<ul style="list-style-type: none">- Build a full Linked List with manual new/delete.- Validate memory usage with tools.
14	Final Project: Mini Memory Pool	<ul style="list-style-type: none">- Create a simple memory pool or allocator.- Focus on minimizing fragmentation and manual memory handling.

Daily Time Distribution:

Time	Activity	Description
1.5 hours	Study and Understanding	Watch or read high-quality resources. Take notes manually.
1.5 hours	Coding Practice	Implement the concept you studied immediately. No copy-paste.
0.5 hours	Review / Experiment	Repeat the code without looking OR explore extra scenarios.
